

**S. Y. B. Tech. (Electrical and Computer Engineering)**

**Semester: IV**

**Subject: Electrical Circuit Analysis**

**Name:** Shreerang Mhatre

**Class:**

**Roll No:** 33 → RRN-103221745

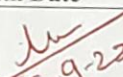

**Batch:** A2

**Experiment No: 02**

**Name of the Experiment:** Generation of various signals (sine, square, ramp, triangular) using MATLAB

**Performed on:** 9/8/2022

**Submitted on:** 6/9/2022

Marks	Teacher's Signature with Date
19/20	 6/9/22

**Aim:** Generation of various signals (sine, square, ramp, triangular) using MATLAB

**Prerequisite:** Knowledge of waveforms equations.

**Theory:**

If the amplitude of the signal is defined at every instant of time then it is called continuous time signal. If the amplitude of the signal is defined at only at some instants of time then it is called discrete time signal. If the signal repeats itself at regular intervals then it is called periodic signal. Otherwise they are called aperiodic signals.

Sine wave, also known as a sinusoidal wave, is a mathematical expression that represents a repetitive oscillation. It is a function of time. MATLAB supports generating sin waves using the 2D plot function.

```
clear;  
clc;  
close;  
f=60; %frequency [Hz]  
t=(0:1/(f*100):1);  
a=1; %amplitude [V]  
phi=0; %phase  
y=a*sin(2*pi*f*t+phi);  
plot(t,y)  
xlabel('time(s)')  
ylabel('amplitude(V)')
```

Similarly you can plot for other types of waveforms.

### Functions:

1. `plot(X,Y)` creates a 2-D line plot of the data in Y versus the corresponding values in X.  
To plot a set of coordinates connected by line segments, specify X and Y as vectors of the same length.  
To plot multiple sets of coordinates on the same set of axes, specify at least one of X or Y as a matrix.
2. `sine = dsp.SineWave` creates a sine wave object that generates a real-valued sinusoid with an amplitude of 1, a frequency of 100 Hz, and a phase offset of 0. By default, the sine wave object generates only one sample. `sine = dsp.`
3. `x = square(t)` generates a square wave with period  $2\pi$  for the elements of the time array t. `square` is similar to the sine function but creates a square wave with values of -1 and 1.
4. `x = sawtooth(t)` generates a sawtooth wave with period  $2\pi$  for the elements of the time array t. `sawtooth` is similar to the sine function but creates a sawtooth wave with peaks of -1 and 1. The sawtooth wave is defined to be -1 at multiples of  $2\pi$  and to increase linearly with time with a slope of  $1/\pi$  at all other times.

### Procedure:

1. Open MATLAB
2. Open new M-file
3. Type the program
4. Save in current directory
5. Compile and Run the program
6. For the output see command window\ Figure window

### Activity:

Create following waveforms:

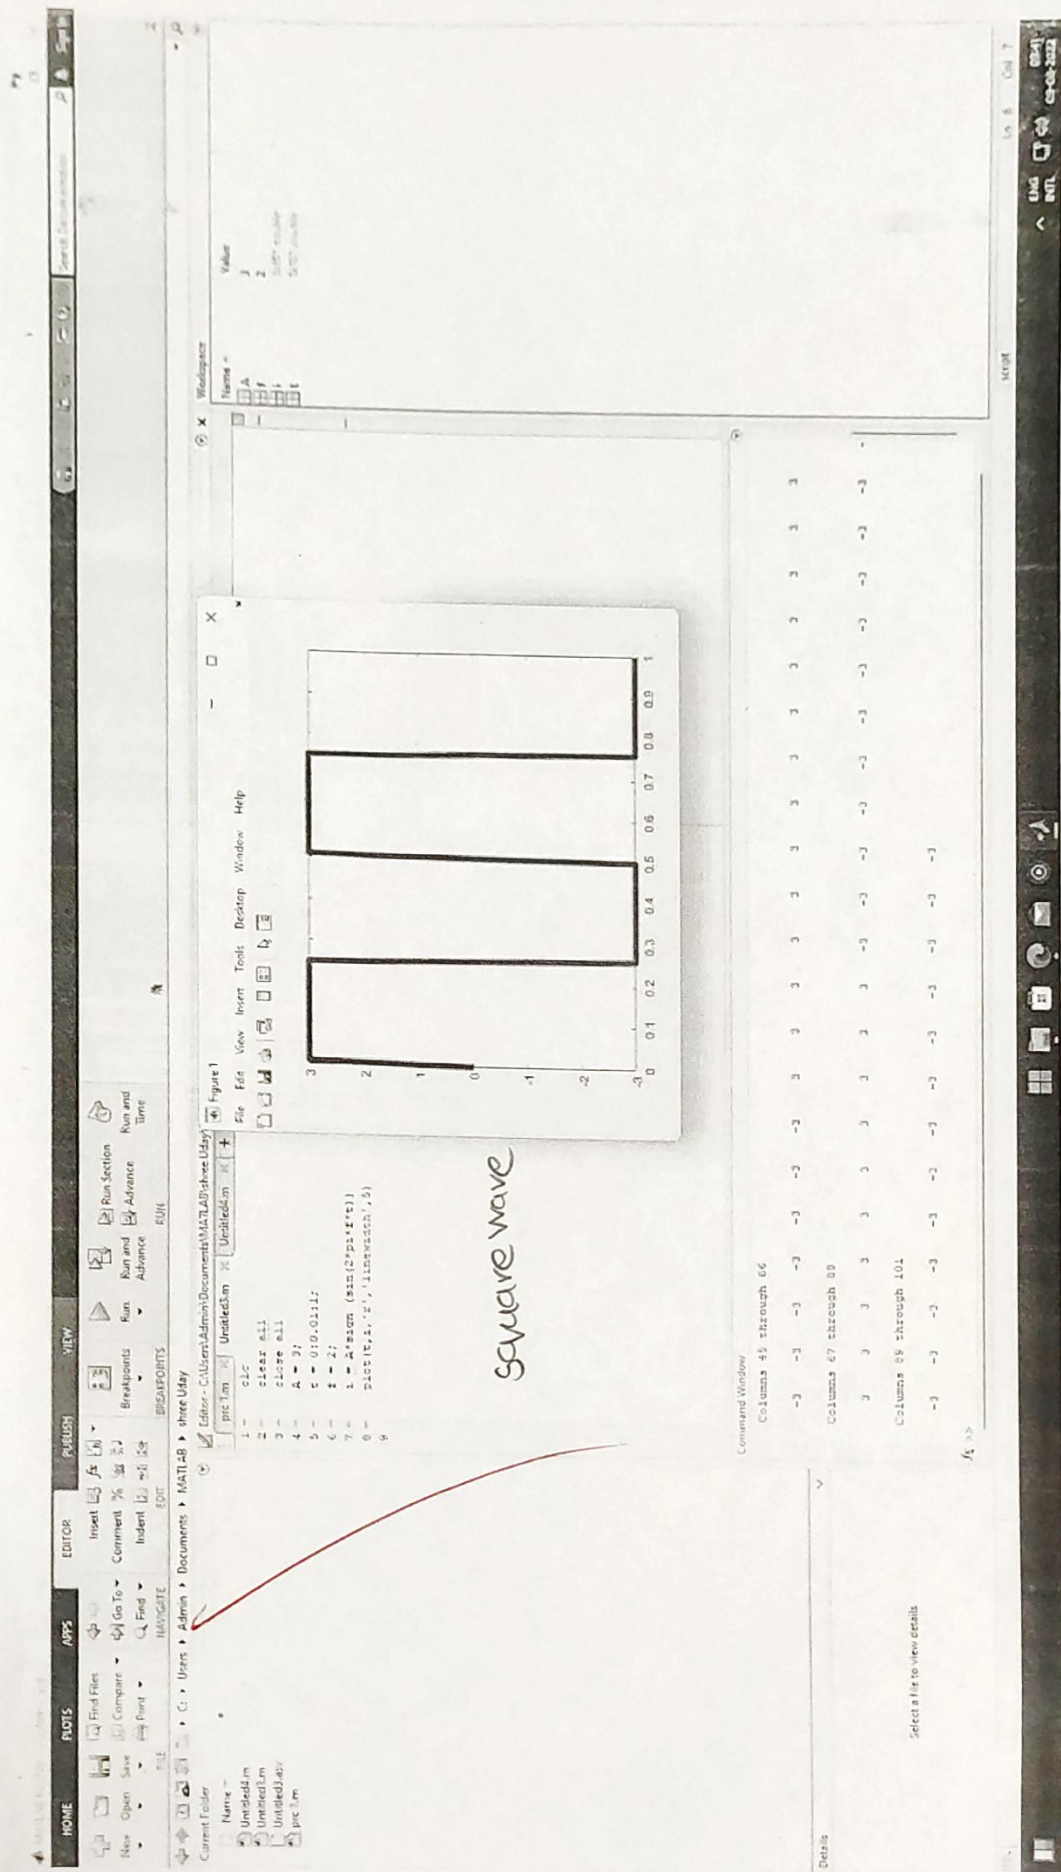

1. Sine wave
2. Square wave
3. Triangular wave
4. Ramp
5. Impulse

### Post Lab Questions:

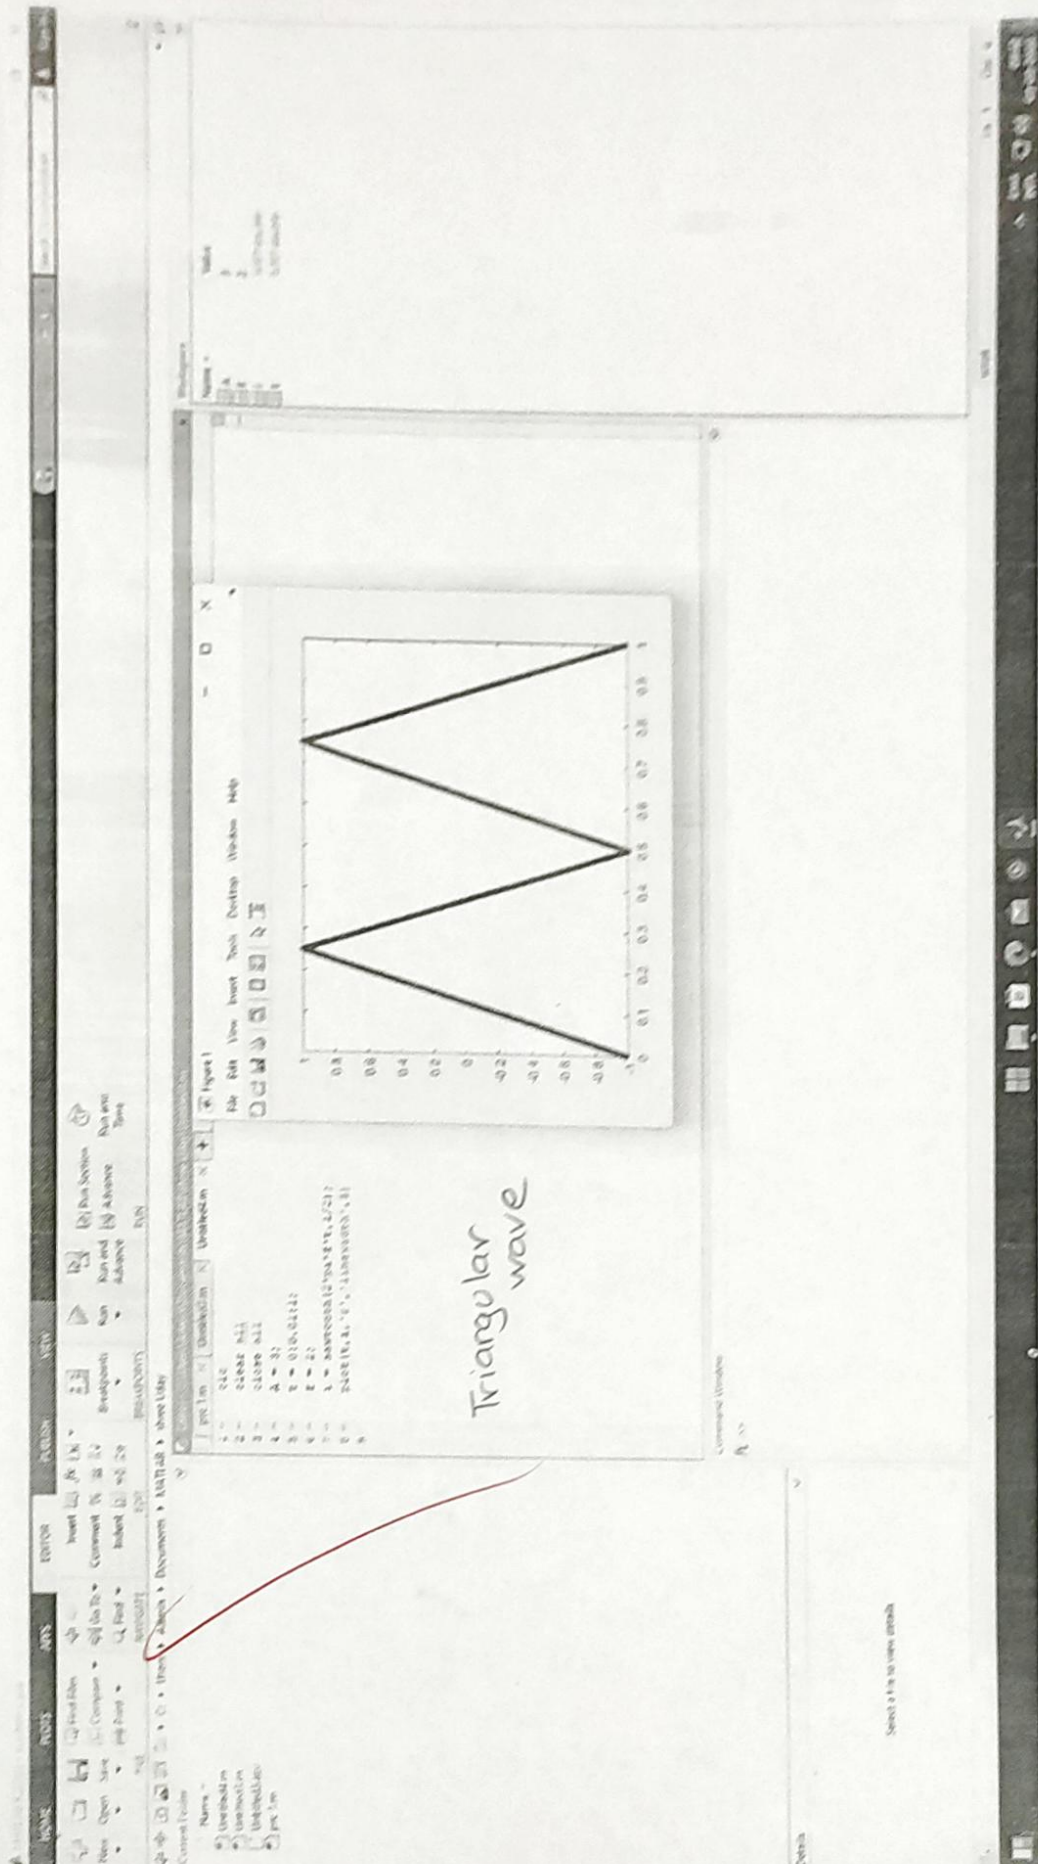

1. Define signal.
2. Define continuous and discrete signal.
3. Differentiate between sawtooth and triangular signal.

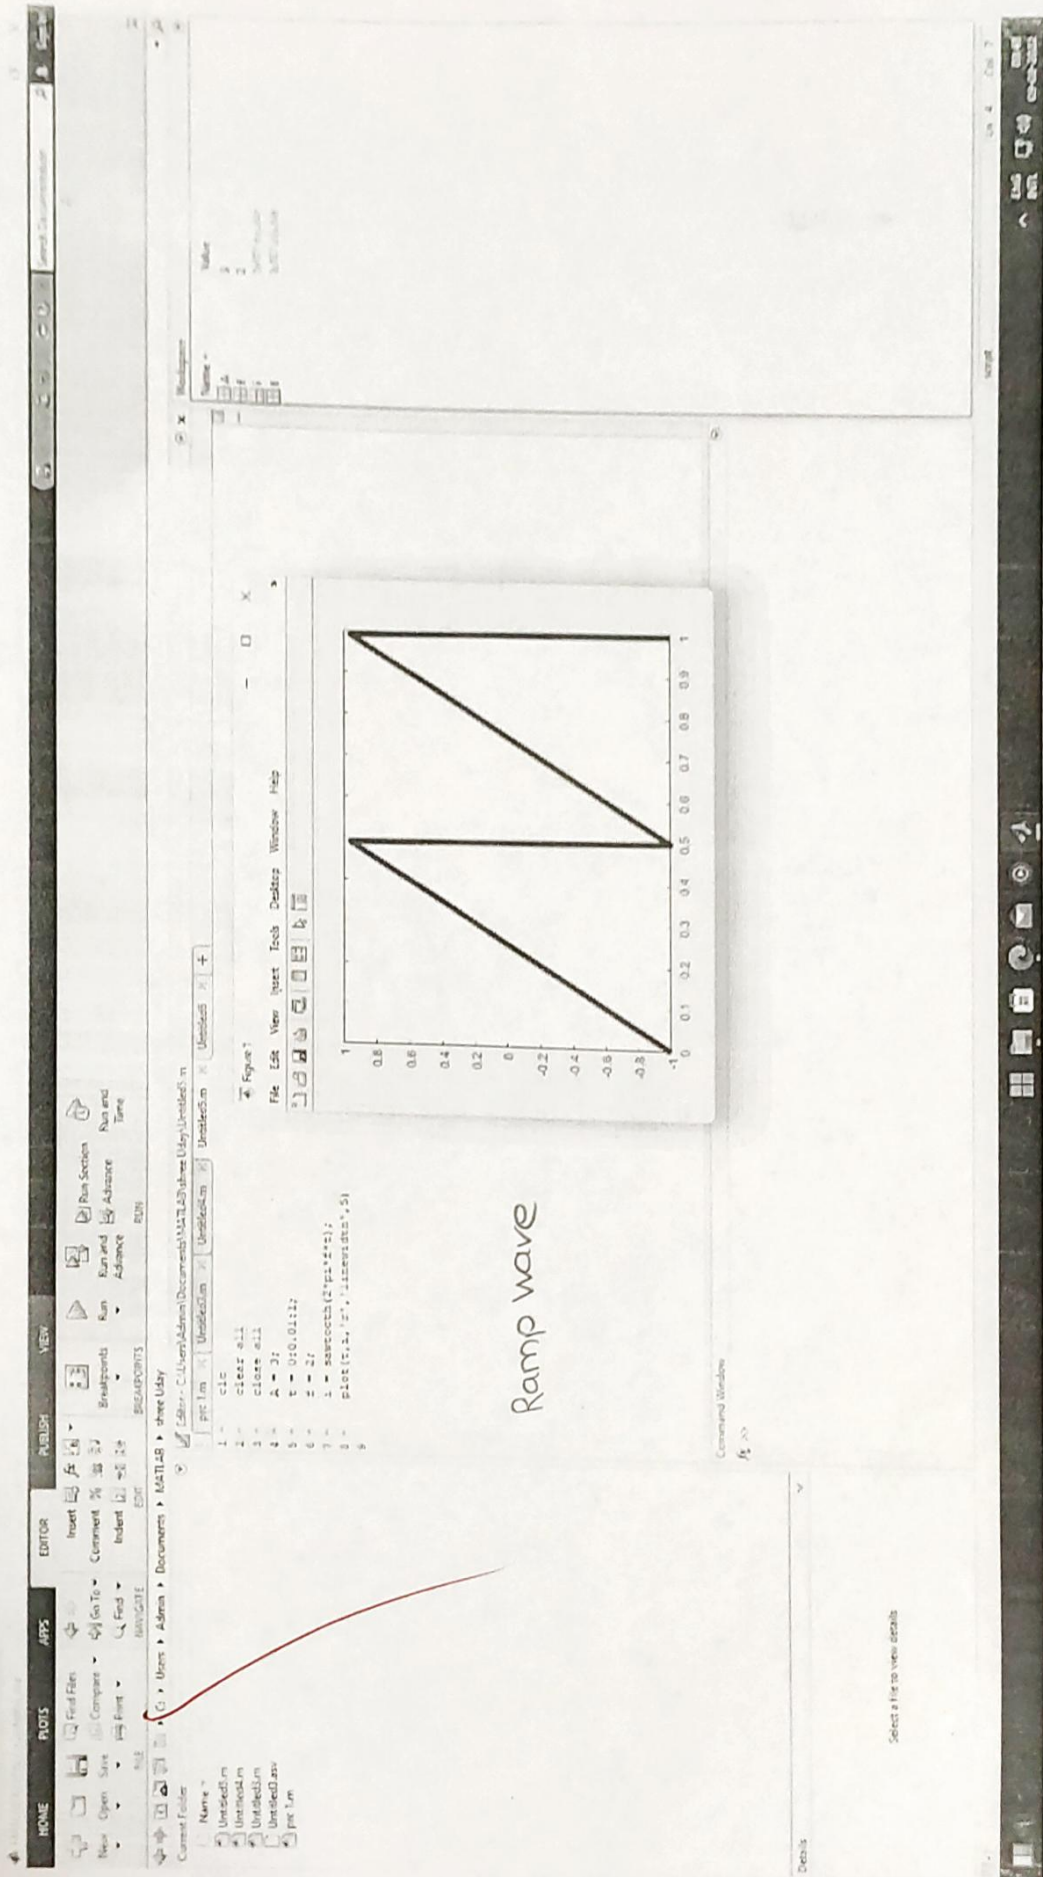

## \* Post Lab Questions

Q 1) Define signal

→ A signal is an electric current or electromagnetic field used to convey data from one place to another.

Q 2) Define continuous and discrete signal.

→ • Continuous - If the amplitude of the signal is defined at every instant of time then it is called continuous time signal.

• Discrete - If the amplitude of the signal is defined at only at some instants of time then it is called discrete time signal. If the signal.

Q 3) Differentiate between sawtooth and triangular signal.

→ The difference between the triangular wave and sawtooth waveform is that the rise time of triangular wave is always equal to its fall of time while in saw tooth generator, rise time may be much higher than its fall of time, vice versa.
